P.D.

1.4.82

A DEVELOPMENT OF A SAMPLING PLAN FOR A STUDY OF POPULATION
DYNAMICS OF TUBERCULOIDES ANNULATUS HARTIG AND SOME
ASPECTS OF ITS BIOLOGY

A thesis
submitted in partial fulfilment
of the requirements for the degree
of
Master of Agricultural Science
in the
University of Canterbury

by

B. H. Rohitha

CONTENTS

CHAPTER	PAGE
I. INTRODUCTION	1
II. REVIEW OF LITERATURE	3
Introduction	3
Host Range	4
Part I	
Sampling Program	5
Precision of Sampling	5
Selection of Sample Units	6
Subdivision of the Habitat	7
Optimum Number of Samples per Subdivision	8
Optimum Number of Trees to Sample Within a Given Precision	9
Sampling	10
Transformation of Data	11
1. Negative Binomial Distribution	13
2. Taylor's Power Law	15
3. Selection of the Transformation	15
Part II	
Morphology of <u>T. annulatus</u>	16
1. Alate Viviparous Female	17
2. Oviparous Female	17
3. Male	17
Life Cycles of Aphids	17
Life Cycle of <u>Tuberculoides annulatus</u>	19
Feeding of Aphids	20

CHAPTER	PAGE
Larval Instars	22
Reproductive Life of the Adult Aphid	22
Reproduction	22
Polymorphism in Aphids	23
Colour Polymorphism in Aphids	24
Leaf Disc Experiments	25
III. DEVELOPMENT OF THE SAMPLING PLAN	29
Location of Sampling Sites	29
Sample Trees	32
Sampling Device	32
Selection of the Sample-Unit and the First	
Sampling	34
1. Sampling Procedures	34
2. Results, Sample Unit	35
(a) Variation Within Hierarchical	
Levels	37
(b) Degree of Precision	38
3. Results, the First Sampling	39
(a) Components of Variance	41
(b) Optimum Number of Samples per Tree,	
First Sampling	42
(c) Optimum Number of Trees per Site,	
First Sampling	45
(d) Field Observations	45
Second Sampling	45
1. Methods, the Sampling Procedure	46
2. Results, Second Sampling	47
(a) Components of Variance	48
IV.	

CHAPTER	PAGE
(b) Optimum Number of Samples per Tree, Second Sampling	50
(c) Optimum Number of Trees per Site, Second Sampling	50
(d) Field Observations	51
Third Sampling	51
1. Methods, Sampling Procedure	51
2. Results, Third Sampling	51
(a) Components of Variance	53
(b) Optimum Number of Samples per Tree, Third Sampling	56
(c) Optimum Number of Trees per Site, Third Sampling	57
(d) Field Observations	58
Suggested Sampling Plan	60
Statistical Methods Used	62
1. Transformation of Data	62
2. Analysis of Variance	68
IV. BIOLOGICAL PROPERTIES OF <u>T. ANNULATUS</u>	69
Rearing Chambers	69
1. Rearing of Coloured Morphs	71
2. Results--Observations	71
A Behavioural Aspect of <u>T. annulatus</u> --Preference of Leaf Substrate	72
1. Materials and Methods	72
2. Results	72
(a) Testing of Hypotheses	74

CHAPTER	PAGE
Aspects of Life History	78
1. Techniques	78
2. Biological Differences in the Two Colour Forms	80
(a) Instar Duration and Pre-Adult Life	80
(b) Survival Rate of Instars	83
3. Growth Pattern of <u>T. annulatus</u>	83
(a) Methods	83
(b) Results	85
4. Effects of Mechanical Disturbances on Development	89
V. DISCUSSION	92
VI. CONCLUSIONS	96
ACKNOWLEDGEMENTS	99
REFERENCES	101
