

**CHARACTERIZATION OF RIVER SAND DEPOSITS AND
ASSESSMENT OF THE SUITABILITY OF MINING SITES**

By

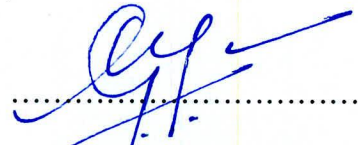

Withanachchige Dona Dasuni Rangavasana Ganegama

Thesis submitted to the **University of Sri Jayewardenapura** for
the award of the Degree of **Master of Science in Geographic
Information Systems and Remote Sensing** on **2014**

DECLARATION

I do hereby declare that the work reported in this project report was exclusively carried out by me under the supervision of Dr. Ranjith Premasiri and Dr. (Rev) Pinanawala Sangasumana Thero. And a report on this has not been submitted in whole or in part to any University or any other institution for another degree.

Date: 03/05/2014

.....
W.D.D.R. Ganegama

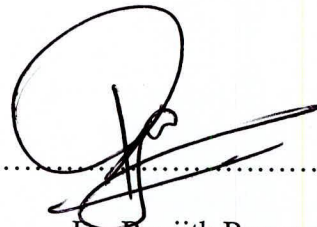

DECLARATION

We certify that the above statement made by the candidate is true and that this thesis is suitable for submission to the University for the purpose of evaluation.

Abstract	xii
CHAPTER 1 – INTRODUCTION.....	1 – 16
1.1 Over View of the Construction Industry & River Sand Mining	1
1.1.1 The Demand for River Sand	3
1.1.2 Rainfall and the Nature of River Sand Deposits	5
1.1.3 The Role of Geological Survey & Mines Bureau (GSMB) in Sand Industry	6
1.2 Research Problem	11
1.2.1 Mismatch of the Sand Deposits and Sand Mines in Kelani River	11
1.2.2 Environmental Consequences of Irrational River Sand Mining in Kelani River	11
1.3 Objectives of the Study	13
1.3.1 Main Objective	13
1.3.2 Secondary Objectives	14
1.4 Study Area	14

1.5 Significance of the Study	15
1.6 Research Hypothesis	16
1.7 Limitations	16
CHAPTER 2 - LITERATURE REVIEW	17 – 49
2.1. River Sand & Mining Activities	17
2.1.1. Hydrology & the River Network of Sri Lanka	17
2.1.2. Geology of Sri Lanka	19
2.1.3. Sand, characteristics of Sand & River Sand	21
2.1.3.1. What is Sand	21
2.1.3.2. Characteristics of Sand	22
2.1.3.3. River Sand	22
2.1.4. Mining and River Sand Mining	23
2.1.5. Manual Sand Surveying Method	24
2.1.6. Problems and issues in river sand mining	24
2.1.7. Solutions & Suggestions Given by the Scholars	27
2.2. Remote Sensing and Satellite Images	27
2.2.1. What is Remote Sensing (RS)	28
2.2.1.1. RS Platforms	28
2.2.1.2. Types of Sensors	29
2.2.1.3. Process of Satellite Remote Sensing	30
2.2.1.4. Characterization of Satellite Remote Sensing	32
2.2.2. Characterization of Satellite Images	34
2.2.3. Image Analyzing and Interpretation	38
2.2.3.1. Image Pre-processing	39
a. Geometric Correction	39
b. Image Enhancement	40
c. Image Mosaicking	41

d.	Histogram and Image Characteristics	42
e.	Image Fusion	43
2.2.3.2.	Image Classification	44
2.2.4.	Image Analysis & Interpretation	47
2.2.4.1.	Data Merging and GIS Integration	49
CHAPTER 3 – METHODOLOGY		50 – 68
3.1	Study Area	50
3.1.1	Topography	52
3.1.2	Climate	54
3.1.3	Geology	54
3.2	Data Collection	56
3.2.1	Image Data	56
3.2.2	Vector and Attribute Data	57
3.2.3	Limitations	57
3.2.4	Software and Tools Used	59
3.3	Data Preparation Method	59
3.4	Image Analysis and Classification	63
3.4.1	Supervised Classification	63
3.4.2	Unsupervised Classification	64
3.4.3	Single Band Classification	66
CHAPTER 4 - RESULTS AND DISCUSSION		69 – 92
4.1	Data Preparation	69
4.1.1	Image Data	69

4.1.2 Attribute Data	72
4.2 Data Classification	72
4.2.1 Supervised Classification	72
4.2.2 Unsupervised Classification	77
4.3 Data Analysis and Discussion	80
CHAPTER 5 - CONCLUSIONS AND RECOMMENDATIONS	93 – 94
5.1 Conclusion	93
5.2 Recommendations	94
References	95 – 97

ACKNOWLEDGMENTS

I wish to express my sincere gratitude to my supervisors, Dr. Ranjith Premasiri, Senior Lecturer, Department of Earth Resources Engineering, University of Moratuwa and Dr. (Rev) Pinanawala Sangasumana, Senior Lecturer & Head of Geography Department, University of Sri Jayewardenapura for the guidance and directions provided to me in conducting this study.

I would like to appreciate the monumental patience, the kind support, and most importantly encouragement extended to me by Dr. Ranjith Premasiri, Senior Lecturer, Department of Earth Resources Engineering, University of Moratuwa which stood by me like a pillar of strength enabling me to complete this research successfully.

The Chairman, Board of Directors, The Director General, General Manager, Deputy Directors, Registrar, and the members of the staff at Geological Survey Mines Bureau who supported me in conducting this study need to be mentioned with lot of gratitude.

Also I am very much grateful to all the Lecturers, Instructors of the MSc program in GIS and Remote Sensing and the staff of the Postgraduate Institute of Science, for the great support and guidance throughout the whole course.

I would also like to express my sincere gratitude to Mr. H. M Prabath Jayantha, Head of GIS Section, Sri Lanka Ports Authority, for his great support during the entire period of my studies.

Further, I wish to thank my husband and all the members of my family for the support extended to me.

CHARACTERIZATION OF RIVER SAND DEPOSITS AND ASSESSMENT OF THE SUITABILITY OF MINING SITES

W.D.D.R. GANEGAMA

ABSTRACT

Construction industry is a key sector in the Sri Lankan economy which is recording a higher growth amongst other sectors. River sand is one of the key ingredients of all construction activities and the demand for the river sand is ever increasing. As a result over extraction of river sand, irrational mining and illegal sand mining cause a series of serious environmental hazards such as river bank erosion, sea water intrusion, lowering the water level, exposure of the river bed to solar radiation and lowering of the ground water level. Geological Surveys & Mines Bureau (GSMB) is the regulating body of river sand mining, sand storage, sand transport and trading and it is observed that while administering the river sand mining, there is a disparity of where the river sand deposits are and where the mining activities are being carried out. The sand surveys were carried out manually and it is a time consuming, tedious and very expensive exercise. The study focuses on characterization of river sand deposits using technology based remote sensing method to assess the suitability of mining sites. The study is limited to a 6 Km stretch of the Kelani River due to monetary and time constraints. I have used the IKONOS geo referenced satellite images, one panchromatic image (Band) in 1 meter resolution and 4 multispectral images (Bands = Blue, Green, Red and Near Infrared) in 4 meter resolution. The images were processed by using supervised and unsupervised methods and identified the river sand deposits. The river sand deposits were quantified and evaluated authorized minable quantity allowed to be extracted in each of the mining sites. The coordinates of the existing mining sites were taken and the locations of the mining sites were overlapped and compared with the identified river sand deposits. The disparity and mismatches of the existing mining sites and deposits have been identified in the study. I propose the model to be adopted and fine-tuned by the GSMB as the

primary basis of regulating and administering the river sand mining process. Also, I wish to propose the remote sensing based sand surveys to be conducted quarterly by GSMB based on the four main rainy seasons and if high resolution radar images have been utilized, identification of the river sand deposits would probably have been more effective. River sand mining is done on all rivers in Sri Lanka either legally or illegally. By regulating the river sand mining based on a rational basis is one of the key areas to overcome numerous serious environmental hazards and I have made recommendations based on my study.
