

**Value Based Approach for Recreational Planning in Horton
Plains and Kaudulla National Parks in Sri Lanka**

By

Rathnayake Mudiyansele Wasantha Rathnayake

(M.Sc, PG. Diploma, B.Sc. Sp. (Hons))

Thesis submitted to the University of Sri Jayewardenepura, Sri Lanka for the award of the Degree of Doctor of Philosophy in Environmental Economics.

DECLARATION

I hereby certify that the work described in this thesis was carried out by me under the supervision of Dr. (Mrs.) U. A. D. P. Gunewardena, Senior Lecturer, Department of Forestry and Environmental Sciences of University of Sri Jayewardenepura, Sri Lanka, and a report on this has not been submitted in whole or in part to any university or any other institution for another Degree.

4th July 2013

R. M. W. Rathnayake

SUPERVISOR'S CERTIFICATION

I certify that the statement made by the candidate is true and this thesis is suitable for submission to the Faculty of Graduate Studies of University of Sri Jayewardenepura for the purpose of the award of the degree of Doctor of Philosophy in Environmental Economics.

4th July 2013

Dr. (Mrs.) U. A. D. P. Gunawardena
Senior Lecturer
Department of Forestry and
Environmental Sciences
University of Sri Jayewardenepura
Sri Lanka

Declaration by the Supervisor

I certify that the candidate has incorporated all the corrections, amendments and additions recommended by the examiners.

Supervisor

Dr. (Mrs.) U.A.D.P. Gunawardena

Senior Lecturer

Department of Forestry & Environmental Sciences

University of Sri Jayewardenapura

3.6.4.4	The econometric model applied in the study	102
3.6.4.5	Obtaining the statistical regression	103
3.6.4.6	Construction of the demand curve	103
3.6.5	Theoretical aspects of hypothetical travel cost method, scenario building and estimation of CS	104
3.6.5.1	Econometric model for HTCM	107
3.6.5.2	Questionnaire survey and data collection	108
3.7	The effect of imposing an entrance fee (distributional impact)	109
3.8	Present value of non market benefits from preserving the site	110
3.9	Implementation of recreational scenarios	111
3.10	Conclusion	111

CHAPTER FOUR

RESULTS AND DISCUSSION

4.1	Descriptive statistics of the sample	112
4.1.1	Studies on visitor satisfaction and visitor characteristics and perceptions	112
4.1.2	Study on estimation of existing local CS at HPNP and KNP	114
4.1.3	Studies on estimation of CS at HPNP and KNP under the different scenarios	117
4.2	Quality of visitor experience and areas to be improved at HPNP and KNP	117
4.2.1	Quality of visitor experience	117
4.2.2	Areas to be improved in recreational planning at HPNP and KNP	119
4.3	Ecotourism potential and resource inventories for HPNP and KNP	122
4.3.1	Ecotourism resource inventories for HPNP and KNP	122
4.3.1.1	Ecotourism resource inventory for HPNP	122
4.3.1.2	Ecotourism resource inventory for KNP	124
4.3.2	Ecotourism potential at HPNP and KNP	126

4.4	Visitor characteristics and perceptions at HPNP and KNP	134
4.4.1	Characteristics and perceptions of local visitors	134
4.4.2	Characteristics and perceptions of foreign visitors	137
4.4.3	Reasons for visiting HPNP and KNP	140
4.4.4	Willingness to pay for visitor facilities/services at HPNP and KNP	143
4.4.5	Rating of visitor attractions at HPNP and KNP	147
4.4.6	Suggestions to improve visitor satisfaction at HPNP and KNP	150
4.4.7	Some findings to be considered in recreational planning	152
4.4.8	Potential of ecotourism concession development for HPNP and KNP	154
4.4.9	Limitations and issues found in the studies on visitor survey	156
4.5	Visitor carrying capacity	157
4.5.1	Visitor carrying capacity at HPNP	157
4.5.2	Visitor carrying capacity at KNP	160
4.5.3	Relationship between crowding acceptance and socio-economic factors	161
4.5.4	Visitor carrying capacity and infrastructure	166
4.5.5	Limitations and issues found in the study of VCC	167
4.6	Estimation of existing consumer surplus of HPNP and KNP	170
4.6.1	Travel cost, opportunity cost and total travel cost at HPNP and KNP	170
4.6.2	Estimation of visitation rates to HPNP and KNP	171
4.6.3	Demand functions for HPNP and KNP	174
4.6.4	Impact of increasing park entrance fee on park revenue	182
4.6.5	Estimation of optimum park entry fee	183
4.7	Measuring the quality of visitor experience in terms of consumer surplus at HPNP and KNP	186
4.7.1	Scenario building	186
4.7.1.1	Scenarios for HPNP	187
4.7.1.2	Scenarios for KNP	189
4.7.2	Estimation of CS values under hypothetical scenarios	191
4.7.3	Resources required for implementation of alternative scenarios	199

4.7.4	Impact of imposing an entry fee for study sites under alternative scenarios	201
4.7.5	Present value of non-market benefits from preserving the sites	207
4.7.6	Issues and limitations faced in the TCM studies	210
4.7.6.1	Some practical issues	210
4.7.6.2	Functional forms	210
4.7.6.3	Aggregation issues	211
4.7.6.4	Substitute prices	211
4.7.6.5	Substitute sites	212
4.7.6.6	Measuring time cost	212
4.7.6.7	Student visitors	213
4.7.6.8	Multiple site visits	214
4.7.6.9	Non-user values	214
4.8	Visitor impact monitoring plan	217
4.9	Conclusion	219

ACKNOWLEDGEMENTS

I wish to express my deepest gratitude and sincere thanks to my supervisor, Dr. (Mrs.) U. A. D. P. Gunewardena, a Senior Lecturer, Department of Forestry and Environmental Sciences, University of Sri Jayewardenepura, Sri Lanka for her guidance, encouragement and valuable advice throughout the study and the preparation of this dissertation.

My sincere thanks to Prof. Hiran Amarasekera, the former Head, and Prof. Nilanthi Bandara, the present Head of the Department of Forestry and Environmental Sciences, University of Sri Jayewardenepura for granting permission for my study.

My special thanks go to Prof. Ranjith Bandara and Prof. Udith Jayasinghe Mudalige for their valuable comments and guidance for improving this dissertation. Further, my sincere thanks and kind appreciation are also due to my colleagues Mr. Ranjan Attygalle and Mr. K.S. Sivayesunnesan and Ms. H. D. Rajapakshe for providing me numerous supports to complete the study.

I would like to thank all of my colleagues for their assistance throughout the study.

Finally, my appreciation is extended to my loving parents and wife Mrs. S. D. R. S. Wijesinghe for their constant assistance and encouragement.

**Value Based Approach for Recreational Planning in Horton Plains and
Kawdulla National Parks in Sri Lanka**

Rathnayake Mudiyanseelage Wasantha Rathnayake

ABSTRACT

Protection of the resources and provision of high quality visitor experience are the ultimate goals in recreational planning. Concern over rising visitation in parks, and accompanying impacts on resources and on visitor experience, and lack of adequate funds have been the major issues in the management of National Parks in Sri Lanka,

Although there have been certain quantitative and qualitative indicators for identifying the quality of visitor experience, economic values are rarely been used in recreational planning. The overall objective of the present study is therefore to propose a value based framework for recreational planning at Horton Plains National Park (HPNP) and Kawdulla National Park (KNP) in Sri Lanka in order to enhance the quality of visitor experience.

This study adopted the hypothetical travel cost method (HTCM) in order to examine how consumer's surplus (CS) changes could be applied in measuring the quality of visitor experience under different scenarios. Onsite surveys were conducted with 200 local visitors and 100 foreign visitors at each site in order to gather information on visitor characteristics and perceptions. Visitor carrying capacity (VCC) was estimated using a normative approach

at five view points for HPNP and at one site for KNP using randomly selected visitors and acceptable levels were recorded and social norm curves were drawn for each viewpoint.

A zonal travel cost method (ZTCM) was applied with 200 local visitors at each site to estimate the present consumer surpluses. Ecotourism potential for both parks were assessed applying evaluation criteria for the available secondary data. The values obtained for each component was used in formulating recreational scenarios which presents improved recreational planning setup. Under each scenario, visitors are asked how many visits they would like to make to the site.

Results indicate that the ecotourism potential is high at both sites, and more ecotourism schemes and concessions could be developed for local community. Visitor characteristics are almost same at both sites and different views and perceptions were presented for improving ecotourism and visitor services at both parks. Results of the VCC study indicate that minimum acceptable number of vehicles within 25 m radius at KNP was nine. The VCC standards for viewpoints at red bridge, chimney pool, Baker's fall, mini and greater world's ends at HPNP are 21, 15, 38, 42 and 44 respectively. According to results of ZTCM, CS values per visitor (per visit) were Rs. 228.71 and Rs.370.16 at HPNP and KNP respectively.

Results of the HTCMT indicate that visitors were willing to visit more than once within a year under improved condition. Therefore, under the scenario 1 at HPNP the CS per visitor was

Rs. 3793.75, and it was Rs.7045.45 for scenario 2. For scenario 1 at KNP the CS per person was Rs.5433.33 and Rs.11295.00 was recorded for scenario 2.

The present value of benefits (PVB) at HPNP and KNP based on the current CS values are Rs. 516.8 million and Rs. 19.2 million at 10 per cent discount rate. If the alternative scenarios are implemented the PVB for HPNP will be Rs. 6433.42 million and Rs. 15245.39 million for scenarios 1 and 2 respectively, at KNP these values will be Rs. 476.19 million and Rs. 1529.65 million under scenario 1 and 2 respectively. The estimated CS values are considerably higher than the current annual investment and operation expenditures of the HPNP and KNP. It could be concluded that if the value based approach is applied, the recreational planning could be done understanding the quality of visitor experience under alternative planning schemes.

Application of value based approach, diversification and establishment of new ecotourism and visitor services schemes, implementation of visitor impact monitoring programme, allocating more funds and human resources to conserve the undervalued natural resources, and introducing new fee structure for national parks are the major policy directions in the present study for both recreational planning and conservation of the natural resource base in national parks.
